## Scab Control Injections

### DECTOMAX INJECTION FOR SHEEP

PML

4015700 ..... 50ml  
4015500 ..... 200ml  
4015600 ..... 500ml  
4016500 ..... 2 x 500ml

One injection is an effective alternative to dipping for scab control, killing gastro-intestinal roundworms and nasal bots at the same time.

Trials have shown a single injection of Dectomax to be 100% effective in killing all live sheep scab mites (*Psoroptes ovis*), clinical signs of improvement will be seen three to five days after treatment. It has been shown that Dectomax injectable solution has a sufficient length of action to prevent re-infection from hatching mite eggs or from mites living off the animal in wool debris.

*Dosed at the rate of 1ml per 33kg bodyweight preferably using the 3ml Phillips injector designed for optimal accuracy of dosing. Seek veterinary advice before treating lambs of 16kg bodyweight or less.*

## Sheep Dips

*The Sale of OP and Non-OP Sheep Dip can only be made to customers who hold a "Certificate of Competence".*

### ROBUST DIP

PML

3205500 ..... 5ltr **Licensed for scab control.** A user friendly cypermethrin dip for control of scab, lice, ticks and blowfly. *Use at 1ltr dip to 400ltr (softened) water. Nil meat withdrawal.*
