 4700711 3/4"

Talbot *Push fit*

A revolution in blue & black polythene pipe jointing

HOW IT WORKS

THE ADVANTAGES

Comprehensive range

The Pushfit joint is available in a comprehensive range of fittings in both service and mains sizes up to 180mm.

Stronger than the pipe

The joint's grip and seal on the pipe increases with water pressure and tensile load so that the pipe will burst or neck before the joint will fail.

Adaptable

Using a common body and only two sets of interchangeable components Pushfit will connect to metric PE pipes and their imperial equivalents including heavy gauge and some normal gauge sizes

User friendly

The quick and easy to use PE pipe fitting with no nuts to leave undone – simply push the pipe into the joint it can be turned on the pipe and won't leak and will only come off if you want it to.

ORDERING FROM CARRS – Ask for a brochure

Talbot Pushfit fittings have common bodies for both imperial and metric pipe, but with different internal components. All fittings come with the required grip ring and 'O' ring assembled inside the body. When ordering please indicate the size and specification of your pipe to enable correct components to be supplied. Normally metric fittings will be supplied unless imperial specified.

THE RANGE – includes adaptors from polythene/iron & polythene/copper

The range of fittings (available in sizes 20-63mm/1/2"-2") includes:

- Straight connectors.
- Reducing connectors.
- 90° bends.
- Tees (equal and unequal).
- Check valves.
- Stop ends.
- Wall plates.
- Stopcocks etc.
