

Neonate package

It is important to promote high rates of daily live weight gain with milk replacer early in life and to encourage starter feed intakes to promote rumen development. Carrs Billington are now including a unique neonate package into all our own branded milk powders containing Safmannan and Early Bite.

EARLYBITE is a sensory additive that modulates feeding behaviour in pre ruminant calves. Early Bite facilitates dietary transition from liquid to solid starter feed by motivating early intakes of starter feed.

SafMannan is a premium yeast fraction that contains high levels of B-glucans which help support the calves immune system. Safmannan also binds to specific pathogens thereby reducing the pathogen challenge.

Total Feed Package

Carrs Billington milk powders are not the only products in the calf rearing range to contain a neonate package.

Carrs Billington Calf Sprinter+ Pellets is a new highly palatable calf starter feed that includes a neonate pack of its own to complement that included in the milk replacers, to achieve high growth rates and successful weaning from liquid to solid feed. Whilst all products work extremely well individually, for maximum effect they should be fed together as a total feed package.

CALF MILK REPLACERS

Maximum+

Maximum+ is ideal for growing the modern dairy heifer. It is a 24% protein, high energy, milk replacer based on digestible whey concentrated milk proteins and specially selected oils.

Protein	24%
Oil	20%
Fibre	0%
Ash	7%

Contains: Immunopro

Astralac+

Astralac+ is a whey based calf milk replacer, rich in specially selected milk proteins and oils. It offers excellent palatability and digestibility to meet the nutritional requirements of the growing calf. Astralac has been developed to stimulate optimum intakes whilst remaining economic to feed, ideal for modern beef enterprises and traditional dairy units.

Protein	20%
Oil	20%
Fibre	0%
Ash	8%

Contains: Immunopro

Whisk+

Whisk+ is based on the high quality milk proteins including skimmed milk powder. The high oil content gives a fast growing calf with a glossy coat.

Protein	24%
Oil	20%
Fibre	0%
Ash	7%

Contains: Immunopro

Creamy Calf

Creamy Calf is a high quality, 35% skimmed milk based replacer that allows the calf to realise its potential for early growth. It offers excellent palatability, solubility and digestibility, ideal for dairy heifers and beef systems.

Protein	25%
Oil	20%
Fibre	0.03%
Ash	6.7%

Creamy Calf is LifeStart Approved.

Bloom

Bloom is a precisely formulated whey based calf milk replacer made using the highest quality ingredients to help provide the best possible calf nutrition. It provides an energy-dense feed for all beef and dairy breeds. It offers excellent palatability, solubility and digestibility while remaining economic to feed.

Protein	23%
Oil	19%
Fibre	0.03%
Ash	8%

Vitality

Vitality is a 50% skimmed based milk replacer based on LifeStart science, specifically formulated for optimal development, resilience to disease and improved longevity. Vitality optimises nutrient supply to calves fed on elevated feeding planes. Vitality is highly digestible formulated with 100% dairy protein and digestible fats, for optimising growth from day one.

All our milk powders are suitable for bucket feeding and computerised feeders.
